

Pasterkamp Metal Sheet Solutions has been supplying custom-made machines for sheet metal working from coil for almost 20 years, all over the world. Pasterkamp is internationally known as a roll forming specialist. This applies to both small profiles and wider panels from coil. Together with their customers, they look at what the right machine is for their production.

MOBILE ROLL FORMING MACHINES

The design and production of mobile roll forming machines has been Pasterkamp's specialty for many years. These are all custom made and can be supplied in different weights, for all kinds of specifications, material widths and thicknesses up to 1.5 mm. Even rotary punching can be incorporated on the machines.

HORTICULTURE AND SOLAR INDUSTRY

A significant number of mobile roll-formers are used in horticulture and greenhouse construction, but the solar industry is also seeing an increasing use of mobile roll-forming machines.

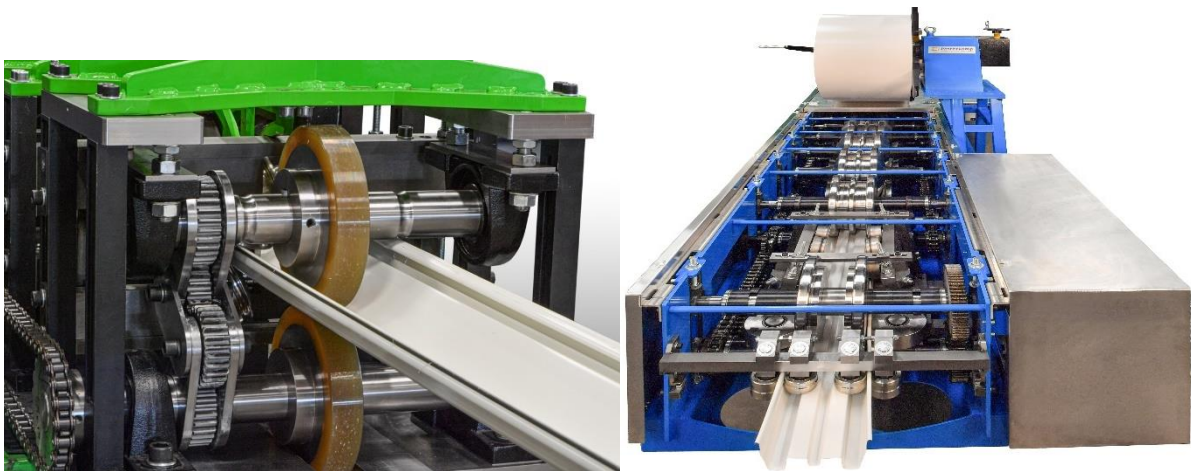

TRANSPORT ON TRUCK OR TRACKS

The mobile roll formers produce all types of gutters and profiles and are specially designed for on-site roll forming from a trailer or from a container. They can be transported on trucks or mounted on tracks. They can even be supplied with a remote control.

DRAWINGS AND QUANTITIES

Pasterkamp is happy to be invited by the customer to discuss which products should be produced. "Important of course are drawings, quantities, and the desired lengths and speed. Then a design can be made. We think along with the customer so that a nice machine can be developed," says Teun Pasterkamp.
